

**! CHAPTER 1
COUNTING;**

! This chapter is the first to appeal to the mathematical axioms and rule of deduction (Induction). It reformulates certain of them in terms of the logical language which has been introduced in Sections II and III and proves simple consequences. It finishes by stating and proving an important lemma and an important theorem. The lemma asserts that a finite count is not changed even if two items are switched; and the theorem states that finite counts yield a unique number. i

! P1 reformulates Count0. i

! 15. As P15 is used in subsequent proofs, it is placed here, even though it does not directly have anything to do with counting.

$\vdash \forall n (\omega[n] \ \& \ \neg n = 0 \Rightarrow \exists p (\omega[p] \ \& \ \sigma[p, n]))$;

! We prove first:

$\forall n (\omega[n] \ \& \ \Rightarrow (\neg n = 0 \Rightarrow \exists p (\omega[p] \ \& \ \sigma[p, n])))$

We use induction, taking ϕ to be

$$(\neg n = 0 \Rightarrow \exists p(\omega[p] \ \& \ \sigma[p,n]))$$

We must prove

$$(\neg 0 = 0 \Rightarrow \exists p(\omega[p] \ \& \ \sigma[p,0]))$$

and

$$\forall n \forall m (\omega[n] \ \& \ \sigma[n,m] \ \& \ (\neg n = 0 \Rightarrow \exists p(\omega[p] \ \& \ \sigma[p,n])) \Rightarrow (\neg m = 0 \Rightarrow \exists p(\omega[p] \ \& \ \sigma[p,m]))).$$

! To prove:

$$(\neg 0 = 0 \Rightarrow \exists p(\omega[p] \ \& \ \sigma[p,0]))$$
